MACAO POLYTECHNIC UNIVERSITY
BACHELOR OF SCIENCE IN COMPUTING
CSAI3121-311/312 Machine Learning and Intelligent Data Analysis
Academic year 2026/2027 | Semester 1

Group Project – Marksheet (update)

Project Team No: 7

Project Team: P2627402 (João Vitor Konrad) – P2627421 (Thiago Honorato Ferreira) – P2627394 (Marcelo Oliveira Volpato).

Member Name	Report (80%)	Presentation (20%)	Total (100%)
Marcelo Oliveira Volpato (P2627394)			
Thiago Honorato Ferreira (P2627421)			
João Vitor Konrad (P2627402)			
Member name (ID)			

Overall Comments:

Criterion	Weight	Excellent	Good	Satisfactory	Limited	Score
1. Executive summary	5%	5: Provides a clear, concise, and engaging summary suitable for a non-technical audience. Explains the problem, data, main findings, practical value, and key limitations. Uses plain language accurately.	4: Contains minor technical jargon or limited discussion of practical implications or limitations.	3: Provides a basic summary of the project and results, but explanations may be too technical, unclear, incomplete	0-2: Missing, very unclear, overly technical, inaccurate, or does not explain the project findings and their practical implications to a non-technical audience.	
2. Problem definition and dataset description	2%	2: Clearly defines both tasks, targets, prediction horizons, data source, location, time range, and relevant variables.	1: Defines tasks and dataset clearly, with minor missing detail.	1: Basic task and dataset description, but important details are unclear or incomplete.	0: Tasks or dataset are poorly defined, inaccurate, or largely missing.	
3. Data processing, feature engineering, and exploratory data analysis	10%	10: Thorough and correct preprocessing; well-justified temporal/lag features; strong EDA with clear, relevant insights and visualizations.	8-9: Appropriate preprocessing and features; suitable EDA and plots, with some explanation.	5-7: Basic preprocessing and EDA completed, but justification, feature quality, or insights are limited.	0-4: Major processing steps missing or incorrect; minimal EDA; evidence of data leakage or poorly handled data.	
4-5. ML methods, model comparison, hyperparameter tuning, results and evaluation	40%	31-40: Correctly implements baselines and at least two suitable ML	21-30: Required models and evaluation are correctly implemented;	11-20: Basic models and evaluation are implemented, but model	0-10: Required models are missing or incorrectly implemented;

		models per task; uses chronological validation; tuning and metrics are well justified; comparisons are rigorous and clearly presented.	appropriate metrics and comparisons; tuning or justification has minor weaknesses.	comparison, tuning, metrics, or time-aware validation are incomplete.	evaluation is weak, invalid, or uses inappropriate random data splitting.	
6. Discussion, limitations, and future work	10%	9-10: Insightful interpretation of results; explains limitations; creative, justified future improvements.	6-8: Sound discussion of main results and reasonable limitations; practical future work suggestions.	3-5: Basic discussion and limitations, generic improvement suggestions.	0-2: Mostly repeats results with little analysis, few meaningful limitations or future ideas.	
7. Project management and teamwork	3%	3: Clear and credible task allocation, timeline, risk register, mitigation actions, quality checks, and thoughtful team reflection.	2: Includes all required elements with reasonable evidence of planning and teamwork.	1: Basic evidence of planning and task allocation, but risk, quality, or reflection elements are limited.	0: Little or no evidence of planning, teamwork process, risk management, or quality assurance.	
8. Responsible impact assessment and conclusion	5%	5: Clearly explains intended use, uncertainty, risks of misuse or overreliance, data limitations, and an evidence-based conclusion.	4: Identifies relevant impacts and provides a clear conclusion.	2-3: Brief or generic impact discussion and conclusion.	0-1: Missing, inaccurate, or unsupported impact discussion and conclusion.	
Report quality	5%	5: Highly coherent, concise,	3-4: Well organized and readable, with	1-2: Understandable but unevenly	0: Disorganized, difficult to

		professional, and easy to follow; figures, tables, citations, and formatting are consistently strong.	only minor issues in writing, formatting, or presentation.	organized; several writing, formatting, or figure/table problems.	read, poorly presented, or missing essential report elements.	
Code quality	5%	5: Clean, well-structured, documented, and fully reproducible; notebook runs end-to-end and results are clearly traceable.	3-4: Mostly readable and reproducible; minor organization, documentation, or execution issues.	1-2: Code works partially but is poorly organized, insufficiently documented, or needs manual intervention.	0: Code does not run, is largely missing, or cannot reproduce the reported results.	
Presentation organization, clarity, and communication	5%	5: Highly clear, logical, visually effective presentation tailored to both technical and non-technical audiences; all members contribute meaningfully.	3-4: Clear and well organized; most key information is communicated effectively.	1-2: Basic presentation structure, but unclear explanations, weak visuals, or uneven participation.	0: Disorganized or unclear presentation; major content missing; very limited participation.	
Individual mark: Understanding of methods, results, and limitations	10%	10: Demonstrate strong understanding and answer questions accurately, confidently, and thoughtfully.	8-9: Answer most questions correctly and demonstrates sound understanding.	5-7: Demonstrate partial understanding; answers are vague, incomplete, or rely heavily on notes.	0-4: Cannot explain key methods, results, or limitations; answers are largely incorrect or absent.
